EDUCATION

University of Florida

Aug 2023 – May 2025

Master of Science in Computer Science, GPA: 3.81/4.0

Gainesville, FL

Coursework: Data Structures & Algorithms, Machine Learning, Cloud Computing, Object-Oriented programming (OOPs), Artificial Intelligence (AI), System Design, SDLC, Natural Language Processing, Data Engineering.

WORK EXPERIENCE

Software Engineer – Full Stack

Oct 2025 – Present

Parse Software, Lincoln, NE

- Engineered a HIPAA-compliant service data platform utilizing **React**, **TypeScript**, **Java (Spring Boot)** and **PostgreSQL**, streamlining backend services while achieving sub-2ms 95% **REST API** response times across high-frequency client workflows.
- Architected scalable **AWS (ALB, EKS, IAM, S3)** infrastructure using **Terraform** (IaC) and **Docker** orchestration, establishing zero-downtime deployments and reducing environment provisioning time by 80% for regulated production systems.
- Fortified **CI/CD** deployment pipelines via **GitHub** for automating **Unit testing (JUnit, JMeter)** and rollout validation, sustaining 99.8% production uptime and accelerating release cycles by 60% across distributed financial services.
- Implemented **OAuth2**, session-based **RBAC** with audit trails and role-based checks, reducing manual reconciliation effort by 30%.

Software Engineer

May 2025 – Oct 2025

University of Florida, Gainesville, FL

- Developed modular microservices using **React (Next.js)**, **TypeScript** and **Java (Spring MVC)**, decreasing user-facing page load times by 40% across production deployments serving 500+ concurrent users.
- Scaled real-time backend operations with **Python** on **GCP** and **GitHub**-based **CI/CD** pipelines, sustaining 500+ requests/min with 98% uptime through automated testing workflows.
- Orchestrated **Kafka**-driven **ETL** pipelines and **AI/ML + NLP** workflows with **Python (LangChain, Hugging Face)**, **LLMs**, and **SQL** databases to support real-time data workflows, improving automated redaction accuracy by 30%.

Software Engineer Intern

Jan 2025 – May 2025

Arrow North Design, Raleigh, NC

- Spearheaded development of a full-stack application with **TypeScript**, **React (Next.js)** and **GraphQL**, elevating frontend performance by 30% for real-time data flows processed across distributed microservices.
- Architected cloud-native **microservices** using **Python (Flask)** with **RESTful APIs** on **Azure**, optimizing **NoSQL** data models to reduce API latency by 40% against high-throughput request volumes.
- Automated release pipelines leveraging **CI/CD (GitHub)** and **Docker**, cutting deployment failures by 75% and accelerating frontend load times by 25% through performance-first engineering practices.

Software Engineer

Apr 2021 – Jul 2023

TCS, Bangalore, India

- Delivered mission-critical workflows using **Java (Spring Boot)**, **Node.js** and **Python**, generating **RESTful APIs** that reduced trade confirmation response times by 45% for high-volume **SQL** data transaction processing.
- Overhauled front-office UI/UX components with **React**, **AngularJS** and **JavaScript** while optimizing **MySQL** queries for data reporting pipelines, dropping production incidents by 30% across 10+ **AWS**-hosted trading systems.
- Streamlined software release quality across platforms using Test-Driven Development (**TDD**), **Unit Testing (JUnit)** automation workflows, yielding an 87% reduction in post-release defects in regulated production environments.
- Directed 3+ cross-functional **Agile (Scrum)** teams via **Jira** and **Confluence** to deliver client-facing modules on schedule, enforcing **HIPAA** compliance and participated in on-call rotations, raising stakeholder satisfaction to 90%.

PROJECTS

Automated AI Agents | LangChain, RAG, LLMs, Automation

Jul 2025 – Aug 2025

- Developed 50+ automated **AI agents** on the MindStudio platform, automating workflows and cutting manual tasks by 45%.
- Streamlined scalable, production-ready solutions leveraging **LLMs** and **RAG** pipelines, increasing task efficiency by 60%.

Redactor AI | Python, React, JavaScript, SQL, LLMs

Mar 2025 – Apr 2025

- Designed a real-time document redaction workflow using **React**, **JavaScript** and **GitHub CI/CD**, accelerating release cycles by 55%.
- Pioneered scalable data **ETL** pipelines with **Python**, **Transformer** models and **Snowflake**, reducing manual processing effort by 40%.
- Projected redaction patterns via **Streamlit** and **Tableau** dashboards, improving review accuracy and decision confidence by 85%.

SKILLS

Languages and Databases: Python, Java, C/C++, HTML5, CSS, JavaScript, SQL, NoSQL (MongoDB)

Frameworks and Technologies: AngularJS, Next.js, Node.js, TensorFlow, PyTorch, Linux, LangChain, Hugging Face

AI Developer and Cloud Tools: AWS, Azure, GCP, Docker, Kubernetes, Git, Cursor Code, GitHub Copilot, LLMs

Analytics and Agile Tools: Power BI, Tableau, MS Excel, Jira, Confluence, Agile, Prompt Engineering, RAG, MCP
